

Cardanic mirror deflectors

Cardanic mirror deflectors are used for guiding the laser beam from the laser source to the processing optics.

Equipment

- Four different aperture sizes of $\varnothing 20$, $\varnothing 30$, $\varnothing 45$, $\varnothing 70$ mm
- range of adjustment $\pm 2^\circ$
- pipe or flange connection options
- directly or indirectly cooled copper mirrors
- setting and securing by means of fine thread screws
- removal of mirror is possible without readjustment

Options

- Temperature monitoring of the mirrors
- Detection of missing mirrors to prevent unsafe use

We are always at your disposal for any questions or further information.
